THE POSSIBILITIES ARE INFINITE

Coral FlexiCom

The flexible way to communicate

icmc **Integrated Coral Message Centre**
Unified Messaging – Flexible Solutions

Complementing Fujitsu's Coral FlexiCom IP-enabled voice server, our integrated Coral Message Center (iCMC) brings the power and flexibility of unified messaging to your office communications on a single integrated card. With voice mail, automated attendant, audio text and facsimile functions, iCMC provides fully integrated messaging via the telephone, as well as complete control of calls and messages from the desktop computer. Best of all, it does not require external equipment or power because everything is internal to the Coral FlexiCom Voice Server.

Unified Messaging

iCMC's unified messaging option allows users to manage voice and e-mail from any telephone or networked PC. By accessing all messages from one place, you can use the nearest messaging device to send and receive all types of messages interchangeably. From your PC, you can control voice mail, e-mail and faxes on screen. With multiple iCMC systems in networked locations, users can receive messages anywhere. iCMC integrates with Microsoft Outlook, allowing you to manage, check and forward your voicemail whilst in your Microsoft Outlook screen.

Fax Communications

The need for a separate fax number and a dedicated line is eliminated because of iCMC's fax detect, routing and notification. When the iCMC hears a fax tone, it automatically transfers the call to an external fax machine.

Easy to Use – Easy to Setup

iCMC has three different operation modes that enable customisation for each user on the system. Users can choose between 1 for Yes, 2 for No® interface menu options, or the TeLANophy® Graphical User Interface (GUI). When accessing messages from a telephone, the 1 for Yes, 2 for No interface makes the iCMC simple for inexperienced users, while the menu option gives “power users” quick access to all functions. The standard TeLANophy feature package allows you to manage inbound and outbound calls and all voice and e-mail communications, on-screen from a network PC. Installation and setup are fast and easy with the user self-enrollment feature. Remote maintenance allows service technicians to add users, change prompts or run file backups via modem. As a result, system managers save time, money and travel.

Feature-Rich Functionality

A long list of unique features sets the iCMC apart from all other voice processing systems. Users can create, list and delete broadcast groups from any touchtone telephone. The ability to cancel messages after they are sent, and the powerful user-to-user messaging features make inter-office communications effortless.

Multilingual Communications

iCMC improves your international presence by allowing callers and users to choose their language. Callers have the flexibility of selecting prompts in a number of languages. With iCMC, you can communicate with people all over the world, and users speaking different languages can use one system. Ideal for the hospitality industry, iCMC also integrates with multiple hotel packages.

Powerful, Flexible Platform

By using a 32-bit on-board multi-tasking operating system, iCMC offers advanced technology that is powerful, affordable and dependable. With the iCMC, end users enjoy many advanced features such as flexible forwarding, silent record, paging and page_Q, whisper page, control call forwarding, do not disturb, and central voice mail for networks. Since iCMC resides in the Coral FlexiCom Voice Server, no additional hardware is required to implement voice mail and automated attendant.
